Professional Summary

CompTIA Security+ certified specialist with 14+ years of hands-on enterprise IT infrastructure, systems administration, network engineering, and security operations experience. Specializing in SOC analysis, threat hunting, SIEM detection engineering (Wazuh, Sysmon), automated log triage, and incident response. Proven track record in executing enterprise network migrations, authoring custom XML detection rules, and isolating lateral movement.

Core Competencies & Technical Stack

- **SIEM & Detection Engineering:** Wazuh SIEM, Sysmon XML Rules, Custom Alert Pipelines, FIM (File Integrity Monitoring)
- **DFIR & Threat Hunting:** Linux Auth/Syslog Forensics, PCAP Packet Analysis (Tshark/Wireshark), Hash Verification, MITRE ATT&CK Mapping
- **Security Automation & Scripting:** Python (Automated IOC & Log Parsers), Bash, PowerShell, YAML
- **Network & Systems Security:** Active Directory (GPO, Event Log Analysis), Dell Versa SD-WAN, Sophos XG, Aruba/Cisco Racking & VOS Upgrades
- **Cloud & DevSecOps:** GCP Multi-Tier Architecture (Terraform IaC, Cloud NAT, Zero Public IP DB Tier), GitHub Actions CI/CD

Security Engineering Projects & Artifacts

PCAP Traffic & Triage Automation

- Processed 50,000+ network packets in < 2.5 seconds using tshark and custom Python parsing scripts.
- Automated detection of web application scans, SQL injection payloads (MITRE T1190), and command execution attempts.

Linux Incident Response & DFIR

- Analyzed 1.2GB of compromised Linux system logs to reconstruct post-incident attack timelines.
- Verified SHA-256 evidence chain integrity and mapped unauthorized SSH key sessions to MITRE T1078.

Wazuh SIEM Rules & FIM Lab

- Authored custom XML detection rules to flag sudo privilege escalation, reducing false

positives by 40%.

- Configured File Integrity Monitoring (FIM) across critical Linux system binaries and configuration files.

Active Directory Security Event Automation

- Developed Python tools to parse Windows Security XML event logs (4624, 4625, 4728).
- Automated real-time alerts for unauthorized 'Domain Admins' group membership modifications (MITRE T1098).

Professional Experience

Jul 2012 – Present Senior IT Infrastructure & Security Specialist | Enterprise Infrastructure, Network & Client Services

- Lead daily security log reviews, incident response triage, malware containment, and structured patch management across multi-tenant environments; apply security-analyst principles to monitor Sophos Endpoint and firewall telemetry for anomalous activity.
- Administer accounts, Active Directory Group Policies (GPOs), RBAC, least-privilege access models, and multi-factor authentication (MFA) across client environments (120+ to 500+ users).
- Physically deploy, configure, and migrate enterprise Dell Versa SD-WAN appliances, perform Versa Operating System (VOS) upgrades, IP configuration, and live connectivity validation.
- Decommissioned legacy Cisco switches, APs, and controllers during the Mastercard Zimbabwe network upgrade, racking and installing new Aruba controllers, switches, and sensor LAN cabling.
- Re-imaged laptop fleets to corporate security baselines during the Ericsson Zimbabwe deployment, joined endpoints to Active Directory domains, configured M365 email access, and installed core switches/APs.
- Executed server migrations, HP switch deployments, VoIP phone rollouts, PC re-imaging, PoE IP camera integrations, and secure legacy hardware decommissioning across AJP Group, Abbeydale Group, and ShermanIT projects.

Certifications & Education

- **CompTIA Security+ (SY0-701)** — CompTIA
- **Google Cybersecurity Professional Certificate** — Google
- **Google IT Support Professional Certificate** — Google
- **BSc in Computer Science** — Unicaf University
